

PRESS RELEASE

**PROVIDENCE EXPANDS ITS TEXAS OPERATIONS TO PROVIDE
COMPREHENSIVE ENVIRONMENTAL COMPLIANCE AND
ENGINEERING SERVICES**

DALLAS, TEXAS
August 10, 2007

FOR IMMEDIATE RELEASE – Providence Engineering & Environmental Group, LLC (Providence), a multi-media engineering and environmental consulting company specializing in air quality, water quality, ecological, and waste management services, announces their expansion into a new and larger office in Dallas/Fort-Worth (DFW). This move is driven by Providence’s continued growth in not only the DFW market but the Texas market statewide. This growth and expansion has been fueled by the recent addition of staff in DFW and Austin. This staff includes Stephen Phillips, P.G. (*Sr. Project Manager*), David Downard, P.E. (*Sr. Project Manager*), Doug Reeves (*Sr. Project Manager*), Denise Prendergast (*Environmental Specialist*), Adria Storer (*Environmental Specialist*), Lisa Stensgard (*Environmental Specialist*), and Erin Lea (*Environmental Specialist*).

With recent addition of staff in DFW and Austin, and a new office space in DFW, Providence has expanded its services related to air permitting, air modeling, air monitoring, pollution control technology, landfill design/engineering, groundwater monitoring, remediation, and industrial water/waste water services in Texas.

Headquartered in Baton Rouge, Louisiana, Providence has grown since its inception in 2000 to over 80 people company-wide. “The growth in Texas will allow us to provide our services to a wider range of clients as well as continue to support our existing client base in an area that is continuing to demand high quality services. We are extremely excited about the market in Texas and the potential for continued success,” said Rich Major, co-founder and Senior Managing Partner.

The growth in DFW also allows Providence to take a step further towards a goal of expanding its specialized services (specifically, ambient air monitoring, landfill design/permitting/engineering, industrial water/wastewater, and ecological services) to a national level.
